

ForK

PALLET LIFT FORK

- Manually or hydraulically adjusted fork
- Compact, innovative, modern concept
- Rugged and durable
- Extremely accurate adjustment
- Chain drive, keeping maintenance to a minimum
- Operates with a recommended pressure of 250 bar, maximum 300 bar

A TOUCH OF MODERNITY

Available in fixed, manual or hydraulic versions, the Kluc pallet fork has an ingenious design for better visibility and handling.

The forged, tempered forks guarantee strength and longevity.

In the hydraulic version, the distance between the hydraulic forks is increased or decreased by means of a control in the cab (increased operator safety and efficiency).

TECHNICAL FEATURES

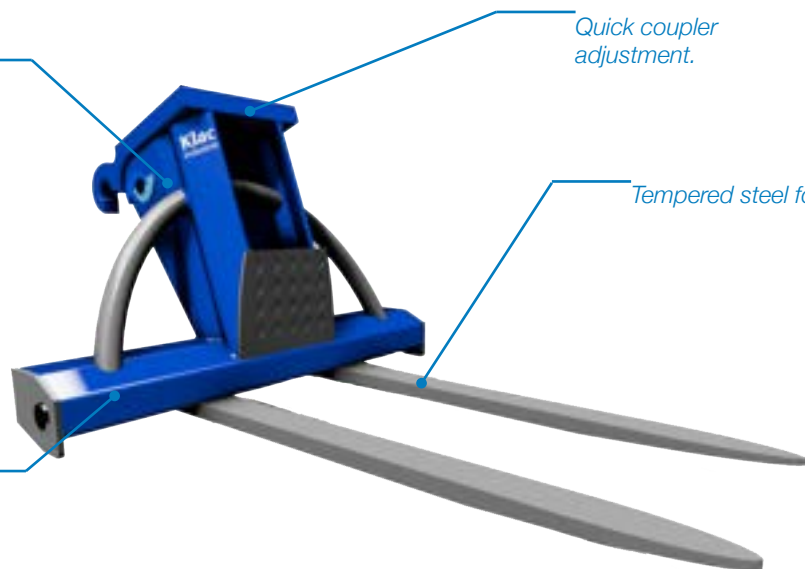

High-strength steel adjustment frame.

Quick coupler adjustment.

Tempered steel forks.

Easy, convenient adjustment:

- from the cab for the hydraulic version.
- on the forks for the mechanical version.

FOCUS ON The hydraulic motor

The cylindrical sliding guide is casehardened and the bushings are sintered to ensure maximum strength and durability.

The chain tensioner system is simple and enables movements to be performed with absolute accuracy.

The entire mechanism is protected against any external impacts.

SAFETY QUESTION

The mechanical forks are held in the correct position by a sturdy stop and their position is adjusted manually.

 The hydraulic forks are held in the correct position by a double-acting check valve. The position is adjusted from the cab.

The fixe version

Product also designed to be used with the rotating coupler: holds the load in a horizontal position.

Has a detachable stand for easy coupling/uncoupling.
