

K - MIX

MIXING BUCKET

1t 24t

1

WARRANTY

New

- Manufactured using anti-wear material
- Chain drive motor
- Automatic spring tensioners fitted on the chain.
- Rotation with roller bearings
- Shaft with grooved profile (Ø50/60mm)
- External grease point
- Hydraulic control of outlet opening.

A CONCRETE SOLUTION !

Designed specifically for concrete production with mini-excavators and backhoes.

The technical solutions **offer maximum efficiency and longevity.**

They are equipped with a solenoid valve with electric controls and a push-button for the hydraulic opening of the outlet, flush-faced quick-connect couplers and a corrugated discharge pipe.

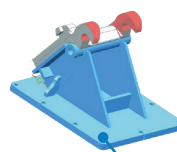

TECHNICAL FEATURES

Hydraulic motor which does not require a safety valve.

Chain drive (>2 t).

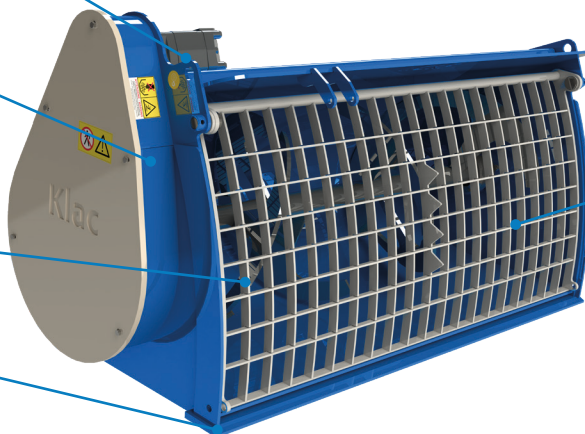

Hardox mixing helix.

Bucket of superior thickness, Hardox blade.

Bolted quickconnect plate.

Bolted protection grille.

FOCUS ON Discharge

The bucket is fitted with two hooks connected to the sliding opening allowing the direction of the concrete flow to be controlled.

The pipe has a handle at the end to aid handling.

The pipe is 1.50 m long with an internal reinforcing spiral structure.

SAFETY QUESTION

The bolted front grille and the grille on the slide (discharge pipe) protect the operator when the bucket is being used.

The bucket can be mounted in "normal" mode or "reverse mounted" to facilitate the operator's work.

Operation

The machine loads sand into the bucket as normal.

When water and cement are added, the mixing screw produces concrete which is pushed towards the centre of the bucket ready to be discharged.

Simple, efficient and robust with spare parts reduced to a minimum.

INAVILABLE WITH
